1. Resume Matching -
https://id-preview--ca1bc8a2-f666-4ba9-abf2-84f99004747c.lovable.app/

Pending task:
Add a cover letter rewrite that matches the same job posting and uses the tailored resume content,

Create a downloadable match report that includes match score, missing keywords, and the what-changed list.

Show missing keywords in my original resume with inline highlights and suggested replacements.

Implement resume rewrite history so I can revisit previous tailored versions anytime.

Add an option to export my tailored resume as a PDF.

Users can choose the template among 30+ award winning templates

Users Login, Registration and Payment gateway

---

2. Domain/Website Trust Checker — WHOIS + SSL check to confirm if a shopping site is newly-registered or suspicious before entering card details. Free + ads, genuinely protects people from scams. -
https://id-preview--069373d2-f667-4412-9b48-e851ffdeef63.lovable.app/?__lovable_sha=45d07fce

Pending task
Add a saved history panel so users can revisit sites they checked and compare verdict changes over time.

Implement a one-click PDF or HTML report export for each check with WHOIS/RDAP, SSL, and certificate transparency evidence.

Create a lightweight browser extension flow that sends the current tab URL to the checker and shows a verdict badge before users type card details.

Enhance error messaging and fallback logic so RDAP timeouts, missing CT data, or invalid SSL chains produce clear “couldn't verify” explanations.

Add an “If it’s suspicious” action checklist with steps to contact payment providers, report the domain, and preserve evidence.

---

3. Screenshot Annotator/Beautifier — Like Shots.so, devs/creators. $5/month.
https://id-preview--5132b8ab-2f05-4188-b60e-a3c40fe9beb8.lovable.app/

Pending task
Add reusable annotation templates (e.g., callout styles, brand colors, and preset padding/frame sizes) I can apply in one click.

Implement shareable, read-only links so I can send annotated screenshots for viewing without granting edit access.

Add export options for PNG and SVG overlays (and an option to export the annotated result at higher resolution).

Add a saved “Projects” library so I can revisit previous annotated screenshots and edit/export them again.

Add support for pasting screenshots via clipboard and drag-and-drop multiple images in the editor.

---

4. Photo/PDF Watermark Adder — Freelance photographers/sellers bulk photo wartmark adder upto 100 images
Pending task

Add opacity and rotation controls for both text and logo watermarks with live preview.

Implement saving and loading watermark presets (text/logo/position/tile settings) for quick reuse across batches.

Enable exporting processed PDFs in addition to ZIP downloads, and let me choose “ZIP” or “individual files” at export time.

Show a per-file progress indicator during batch export so I can see which images/PDFs are being watermarked.

---

5. Consumer Complaint Drafter — Input the issue, get a formatted complaint for Consumer Forum/NCH. One-time ₹99 or subscription for repeat filers (resellers, service businesses).
Pending task:
Implement a complaint intake page where I can enter the incident details and required fields for Consumer Forum/NCH.

Create a complaint generator that outputs a properly formatted complaint ready to copy/download for Consumer Forum/NCH.

Save each generated complaint to my dashboard so I can review, edit, and re-download past drafts.

Add a one-click option to export the generated complaint as a downloadable PDF.

Integrate Stripe subscription limits so paid users can generate more complaints while free users get a small quota.

---

6. Rent Agreement Generator — State-specific stamp paper + clause templates, e-sign integration. Landlords/tenants pay ₹199–499 per doc vs ₹1,500+ for a lawyer. Build this SASS product for me
Pending task
Implement user authentication and dashboard so users can save and reopen drafts.

Integrate Razorpay checkout for the ₹199–₹499 plans and store payment status per agreement.

Wire Digio (or another provider) e-sign with Aadhaar OTP and redirect users to complete signatures.

Add Razorpay webhooks to automatically update agreement state after successful or failed payments.

---

7. Government Accountability,
in plain sight. App + Web

---

8. Gratitude Journal App + Web

---

9. Life Left and Day Progress, App + Web

---

10. 100 days streak

---

11. Brain Dump App + Web

---

12. One Focus Link

---

13. Pose Perfect Studio

---

14. Nutri Score Calculator, App + Web

Add my AdSense publisher ID and your two slot IDs to switch reserved ad areas to live units.

Add a nutrition facts breakdown (calories, sugar, salt, fat per 100g) alongside the health score.

Add a share button that generates a link to the scanned product score page.

Add an option to export the scan result as a PDF report with reasons and key nutrition values.

---

15. Verified GST

Add public API documentation with example requests and response payloads for single and bulk GST verification.

Implement API key auth for the public GST API so free and ₹99/month plans have separate rate limits and usage tracking.

Enhance the bulk verifier to accept a CSV template upload, show row-level validation errors, and allow retrying failed GSTINs.

Add filters to the verification history page and enable exporting the filtered results to CSV and JSON.

Add caching for verified GSTIN results to reduce repeated lookups and speed up bulk verification.

---

16. Fake Data Generator

Implement authentication and API key support for the $5/month plan so paid users can access higher limits.

Add per-user rate limiting and request quotas to the public and paid generate API endpoints.

Add support for exporting generated data as JSON, CSV, and SQL insert statements from the generator UI.

Create a feature to save generator presets (selected fields, row counts, formats) and reload them later.

Add robust input validation and detailed error responses for /api/public/generate when users submit invalid parameters.

---

17. Cron Expression Builder — Dev utility, ad-supported.

Add strict cron expression validation with clear inline error messages for invalid fields and ranges.

Add a configurable preview that lists the next 10 scheduled run times and updates as I change the expression.

Add a timezone selector so the next-run preview is calculated in the timezone I choose.

Add shareable links that encode my cron expression and selected mode (5-field or 6-field) so I can send it to others.

---

18. Event Count Down Countdown/Event Page Generator (shareable link) — Weddings, launches. Free + ₹99 custom brandings

Things to do : Implement Stripe checkout for the ₹99 custom branding and unlock it after payment succeeds.

Add logo and color upload controls to the branding editor and apply them to the public event page theme.

Add view and share analytics for each public /e/$slug page and show trends in the dashboard.

Create an RSVP feature for event pages and send guest confirmation emails after submission.

Add an ICS/Google Calendar download button so visitors can add the event date to their calendar.

---

19. Coaching Business All-in-One — Scheduling + invoicing + client notes for solo coaches/therapists.

Need to implement
Add a frictionless sign-up and onboarding flow so visitors can start a free trial and set up their first client.

Implement an interactive live product demo that lets me try scheduling, generate an invoice, and save a client note in one guided walkthrough.

Add a premium pricing section with monthly/annual toggle and connect Stripe checkout for subscriptions.

Add testimonials and coach case studies with a swipeable carousel to build trust and improve conversion.

Integrate analytics event tracking to measure landing interactions and optimize micro-interactions for higher conversions.

---

20. Micro-Cohort Course Platform — Lite Maven for solo experts running 2-week cohorts. 5% of revenue or $29/month -> Make a modern, premium asthetic and cool UI for this app backed by human psychology making users to stayn on the website for longer and make sure the website has micro tiny tiny multiple interactions that customers love.

Pending task:
Implement Stripe checkout for both $29/month and 5% revenue plans with the pricing toggle reflecting the correct product.

Add a premium email waitlist signup form with frictionless validation and subtle success/error micro-interactions.

Build a course preview page that shows a 2-week cohort outline with interactive tabs and scroll-based animations.

Add a testimonials section with an auto-advancing carousel, drag support, and micro-hover interactions that feel noir-premium.

---

21. Scheme Savy

Implement the real eligibility rules so the 10-question quiz correctly matches state + central schemes for my user profile.

Integrate Stripe checkout for the ₹299 application assistance upsell and unlock the full results after payment success.

Add user accounts so I can save my quiz progress and see unlocked scheme results on future visits.

Add a state selector so I can generate scheme matches specific to both state and central schemes.

---

21. Loan Rejection Explainer — Upload CIBIL report, get plain-English reasons + fix-it roadmap. ₹149 one-time; huge search volume, near-zero good tools exist ->Create a Modern asthetic premium UI that has micro interactions and keeps the users hooked based off consumer psychology and psychological trigger must be there for users to pay and use this platform.

Add a CIBIL report upload flow that validates the file and sends it for decoding.

Integrate the ₹149 one-time checkout so users can pay and then unlock report results.

Build a results page that shows plain-English rejection reasons with confidence scoring and highlights the key factors.

Generate a personalized fix-it roadmap with prioritized actions, timelines, and a progress checklist.

Implement a dashboard that stores past uploads and lets users revisit previous explanations.

---

22. Consumer Complaint Drafter — Input the issue, get a formatted complaint for Consumer Forum/NCH. One-time ₹99 or subscription for repeat filers (resellers, service businesses) -> Create a Modern asthetic premium UI that has micro interactions and keeps the users hooked based off consumer psychology and psychological trigger must be there for users to pay and use this platform.

---

23. Debate Arena — AI-moderated structured debate with scoring on argument quality, not just who talks loudest.

Create src/routes/verdict.$debateId.tsx with the final scorecard, winner banner, per-criterion totals, and rematch/share actions.

Implement src/routes/history.tsx to show a list of saved debates with the ability to delete entries.

Update src/routes/__root.tsx to include the Oswald + Inter link tags and mount the @/components/ui/sonner <Toaster /> so debate-page toasts render.

---

24. Crypto Tax Calculator (India's 30% + 1% TDS rules) — Import trades from exchanges, auto-calculate tax owed under India's specific crypto tax law. Massive, underserved, recurring seasonal demand, integration of ads

Implement real Google AdSense loading and consent handling for my AdSlot placeholders.

Add a one-click PDF export for my filing report and tax summary cards.

Improve my CSV import by adding format detection, column mapping, and validation for popular India exchanges.

Show an itemized explanation of every tax number in my dashboard so users can audit the calculation details.

---

25. Rubik's Cube Blind-Solve Trainer — Step-by-step algorithm trainer with a built-in timer and streak tracker.

Add a sign-up and login flow with a first-time training setup wizard.

Add a weak-pair heatmap that ranks OP/M2/3-style steps by accuracy and time.

Implement custom recall drill sessions where I choose target cases, step length, and drill duration.

Add an export button to download my training history and streak stats as a CSV or PDF report.

---

26. All in one Calculator App + WEB

---

27. Markdown to PDF and word
Add configurable page size, margins, and font options to my PDF and Word exports.

Implement drag-and-drop Markdown file upload so I can convert .md files without manually pasting text.

Save my recent exports and provide a quick download list with timestamps.

Implement the ₹29 checkout flow to unlock no-watermark exports and remove ads after payment using Stripe.

---

28. Email/PDF Signature Generator — Ads supported

Add an in-app settings page to enter my ca-pub ID and ad slot IDs so ads work without editing code.

Implement a GDPR/CCPA consent banner that lets me control ad loading based on user consent.

Add analytics events for ad impressions and clicks so I can measure performance in my dashboard.

Add an option to export my signature as PNG or SVG in addition to generating the signed PDF.

---

29. Client Onboarding Portal Builder — Freelancers/agencies send one link instead of 6 emails. $12/month

Add a signup and login flow to my app so clients and freelancers can access their portals.

Implement Stripe checkout for the $12/month plan and connect it to user access.

Create the client onboarding portal dashboard where my clients can view steps and their progress.

Build a multi-step onboarding form that clients complete via the shared link, saving progress automatically.

---

30. INTERVIEW AI COACHING
Mock Interview Simulator (voice-based) — SASS till that helps to prepare for face to face interview Whisper API + GPT scoring on communication rounds. ₹299/session

Pending task:
Add a Stripe checkout flow for ₹299 per session and redirect back after payment.

Implement the “Start Mock Interview” flow with role selection, session timer, and voice capture controls.

Connect Whisper for speech-to-text and use GPT scoring to generate per-round communication feedback and a final score.

Add a results dashboard where I can review past sessions, see round-by-round scores, and download a summary report.

---

31. ATS Resume Score + Fix Tool — Upload resume + JD, get match score and rewrite suggestions ₹199/report or ₹499/month unlimited. -> Create a Modern asthetic premium UI that has micro interactions and keeps the users hooked based off consumer psychology and psychological trigger must be there for users to pay and use this platform.

Add a resume and job-description upload flow that generates my ATS match score and feedback instantly.

Implement the ATS keyword matching and scoring logic so my report shows keyword matches, gaps, and an accuracy explanation.

Integrate Stripe checkout for the ₹199 single report and ₹499 unlimited plan with a risk-reversal guarantee message.

Create a dashboard where I can view my past reports, compare scores over time, and access rewrite suggestions.

Add a one-click PDF export so I can download my ATS report and rewrite preview.

---

32. Digital Will & Nominee Tracker — Middle-class families avoiding lawyers. ₹499 one-time, hugeemotional WTP once you nail the trust signals.

Add a step-by-step digital will setup wizard with autosave and progress micro-interactions.

Build a nominee tracker dashboard that shows beneficiaries, allocation percentages, and review status with visual alerts.

Implement a ₹499 one-time checkout flow with a paywall that unlocks the will builder after payment.

Create a trust-and-security section with expandable proof points, encryption messaging, and timeline guarantees to boost conversion.

Add email reminders for updating nominees and reviewing the will every 6–12 months, including a re-open link.

---

33. Simply Invoice GST/Invoice Generator for Micro-Sellers - Meesho/Instagram sellers who aren't GST-registered still need clean invoices. ₹99/month -

Pending

Add a Stripe checkout flow so I can subscribe to ₹99/month and manage my plan from the app.

Implement email login and a dashboard where I can generate invoices and access my saved invoices after subscribing.

Create an invoice/Bill of Supply generator with product lines, GST fields (non-GST), seller/buyer details, and a live preview that matches the landing page style.

Enable one-click PDF export for each generated invoice and download it in one step.

Add an invoice history page with search, edit, duplicate, and quick download to keep me returning to the app.

---

34. One Punch man workout - App + Web app

---

35. Memory Sprint- app + Web

Card Memorization Speed Game — Daily shuffled-deck memorization challenge, beat your own record,

Pending
Add daily streak tracking to my runs so I can see how consistently I’m improving.

Implement export and import for my locally stored records so I can back them up or move devices.

Add practice mode options that let me choose deck size and difficulty for targeted training.

Add sound and haptic feedback for key timer events so the game feels more responsive.

Improve the stats page with charts and per-deck best-time breakdowns so I can analyze my progress.

---

36. Salary + Tax Calculator (current tax slabs) — Auto-updates for the latest budget's tax rules. Huge seasonal search spike every Feb–July. Free + ads.

Add my AdSense publisher ID and the three Ad slot IDs so the real ad scripts load instead of placeholders.

Implement a cookie consent banner that meets GDPR/consent requirements before loading ads or tracking scripts.

Enable sharing by generating a URL that preserves my calculator inputs and tax results.

Add structured data (FAQPage/HowTo/Article) to the relevant pages to improve search visibility for tax queries.

Integrate analytics events for calculator usage (inputs, regime selected, CTA clicks) to measure and optimize the Feb–July traffic spike.

---

37. Real Estate Price-Per-Sq-Ft Tracker — Aggregates locality price trends so buyers/renters know if they're being overcharged. Free + ₹199 detailed locality report.

Implement Stripe checkout and webhooks so I can unlock the ₹199 detailed locality report after successful payment.

Add a feature to let me save searches and locality pages to view updates when new price trends are published.

Add a confidence score and data freshness indicator to each buy/rent range and 6-month trend so I can trust the estimates.

Add a compare page where I can select two localities and see side-by-side per-sq-ft trends and buy/rent ranges.

Add the ability to generate and download a formatted PDF of the detailed locality report after I unlock it.

---

38. Currency/Unit Converter (offline-cached) — Ad-supported, evergreen traffic

Add my AdSense publisher ID and the three slot IDs into src/lib/ads.ts.

Paste my publisher line into public/ads.txt so AdSense can verify site ownership.

Implement a production-only debug panel that confirms ads are loading and the offline service worker is active.

Add a manual “Refresh rates” button with a “Last updated” timestamp for ECB rates.

---

39. Clinic/Doctor Appointment + Patient Records — Lite Practo for solo practitioners who don't want enterprise pricing. ₹799/month.

Add a smooth “Request a Demo” flow with a short form that opens a confirmation modal and collects name, clinic name, specialty, and email.

Implement a premium pricing section with ₹799/month, feature bullets, and an interactive monthly-vs-yearly toggle that updates the total instantly.

Add a sticky bottom booking widget that expands into available time slots and shows a realistic confirmation state after selection.

Create an interactive “Patient Records” preview with sample data cards, search-as-you-type, and a soft highlight animation on hover.

Implement a trust section with badges, privacy/security copy, and a micro-interaction checklist that animates as users scroll.

---

40. LinkedIn Cold Outreach Personalizer — Chrome extension, scrapes profile, drafts a personalized connect note. ₹299/month, dev/sales/recruiter market.

Add a first-run onboarding flow that explains how to scrape a profile and generate a connect note.

Implement a premium connect note editor with tone controls, character count, and copy-to-clipboard with feedback animations.

Add a live preview panel that shows what profile fields were extracted before drafting the connect message.

Create a notes history and performance tracker so users can see which drafted messages they sent and when.

---

41. Text/Code Diff Checker — Devs, ad-supported.

Add shareable links so users can revisit the same diff results later.

Prepare the app for production by setting up build configuration, environment variables, and a deployment target.

Add an option to generate and download a PDF report of the diff results.

Enhance the ad experience with responsive placement and non-intrusive loading while keeping the page usable.

---

42. Restaurant QR Ordering + Inventory Dashboard — Ties into MenuSnap; small cafes need ordering + stock in one place. ₹999/month. -> App + Web

Implement the QR ordering experience with menu browsing, cart, and order submission for the restaurant site.

Create the inventory dashboard with product list, stock updates, low-stock alerts, and quick edit controls.

Connect my app to MenuSnap so menus and items sync automatically into the ordering and inventory screens.

Add login/signup and restaurant owner roles so each cafe sees only its own orders and stock.

Set up Stripe checkout for a ₹999/month plan and gate the dashboard behind an active subscription.

---

43. Job Application Auto-Tracker — Gmail-parses application emails, shows a Kanban of where you stand. Freemium, ₹149/month pro

Pending
Add a quick onboarding walkthrough that explains Gmail connection, Kanban flow, and key micro-interactions.

Implement a premium paywall experience for ₹149/month with clear feature gating and upgrade prompts inside the Kanban.

Add micro-delight effects like confetti, toast confirmations, and an undo button whenever I move an application between Kanban columns.

Add inbox preview filtering and search so I can quickly find applications by company, role, or status.

Improve accessibility and UX with keyboard shortcuts, reduced-motion mode, and better empty/loading states across the UI.

---

44. General invoicing tools — Most aren't GST-native by default, requiring manual correction. → A genuinely GST-first invoicing tool for solo Indian freelancers.

Pending:

Add the BusinessForm component with GSTIN, business address, bank details, and invoice metadata wiring to the GST engine state.

Implement the ClientForm component with client type (registered/unregistered), GSTIN, billing address, and automatic place-of-supply selection.

Build the LineItems component to manage rows, item/service descriptions, HSN/SAC, quantities, taxable values, GST rates, and automatic totals per line.

Create the InvoicePreview paper document with GST tax-rate summary tables, declarations, signature block, and export-to-PDF/print readiness.

Rewrite src/routes/index.tsx into the two-panel app layout and add the preview verification pass plus font link in __root.tsx.

---

45. A tool that turns you talking about your day into a written journal entry — with your mood tagged automatically.

App + Web

Add a /journal route (and authenticated layout) so AppShell links compile and protected pages render correctly.

Implement the journal capture page with mic recording, transcript review, mood selection, editable generated entry, and save to Supabase.

Create the journal list page with search, mood filter, and a 30-day mood strip.

Build the entry detail page to view and edit a saved journal entry, including mood and highlights.

---

46. Blindfold Chess Trainer — Gamifies the actual skill you practice; progressively harder positions, streak-based ranking.
App + Web

Add a training history page where I can review past sessions, my drill scores, and how my streak changed over time.

Implement performance charts on my dashboard (e.g., accuracy by drill type and difficulty progression) using the stats we already compute.

Resolve the hydration warnings on protected routes so signed-in redirects don't cause any console noise.

Create an achievements/medals system with milestone rewards (streaks, rank jumps, best drill scores) that shows up on the dashboard.

---

47. Generic vs Branded Medicine Price Comparison

App + Web
— Compare a prescribed brand against its generic/Jan Aushadhi equivalent. Genuinely saves families real money every month. Free + affiliate to pharmacy delivery.
Add price alert emails so users can get notified when a brand or generic equivalent price drops in their area.

Enable user profiles to save favorite medicines and past brand-vs-generic comparisons for quick access.

Add a prescription review step that highlights extracted medicine names/dosages and asks the user to confirm before generating the comparison.

Add a partner pharmacy delivery page that shows available delivery options by PIN code along with affiliate links.

Add bilingual (English + Hindi) search and display for medicine names so users can find generics by commonly used spellings.

---

48. Currency Converter With Real Fee Disclosure — ExchangeRate API, but shows the actual cost after your card's forex markup, not just the mid-market rate. Saves travelers real money. Free + ads.

---

49. Meta Tag / OG Image Previewer — Devs checking link previews before shipping. Free + $3/month.

Implement real Pro authentication and subscription gating so $3/month users get their premium features instead of the placeholder.

Add a saved history panel so I can revisit previously checked URLs and compare changes over time.

Add bulk URL submission so I can paste multiple links at once and generate a preview report for each.

Add configurable crawler settings (like user-agent and follow redirects) so previews match how each platform fetches my links.

---

50. Voice Recorder → Transcript + Summary — Interviews/lectures.

Add inline editing for transcripts and structured summaries so I can refine them after transcription.

Implement full-text search and topic filtering across my library transcripts and summaries.

Add an export button to generate a downloadable PDF (and Markdown) of the transcript and summary for each recording.

Implement a share feature that creates secure links with access controls for a recording’s transcript and summary.

---

51. Screenshot-to-Component Tool — Upload UI screenshot, get Tailwind/React code. $10/month, huge demand post-v0/Cursor era. -

Verify that the production build and dev server run successfully after the styles fix.

Add a screenshot upload step that sends the image to the backend and starts code generation.

Implement a results page with a code preview/editor and loading streaming output while the Tailwind/React code is generated.

Add a generation history panel so users can revisit past screenshots and generated outputs.

---

52. Browser-Based API Request Tester (Postman-lite) — Free + $4/month for saved collections ->

Implement Stripe checkout for the $4/month Pro plan and gate “saved collections” behind an authenticated subscription.

Add create/edit/delete saved collections and persist them to the backend so users can reuse requests across sessions.

Save request history to the user account and load it on return visits instead of only keeping it in the current session.

Add collection import/export (JSON) so users can move requests between accounts and share them easily.

---

53. Gym/Studio Membership + Class Booking — Local gyms still run on WhatsApp groups. ₹99/month. App + Web

Add membership plan cards for ₹99/month and any tiers, with a clear compare table and a one-tap checkout CTA.

Implement a step-by-step class booking flow with date/time selection, trainer selection, seat availability, and a final confirmation screen.

Add a post-booking prompt that encourages users to share or message on WhatsApp with a prefilled booking summary.

Add a 30-second onboarding quiz that personalizes recommended classes and membership benefits immediately on the homepage.

Add a bookings streaks history page showing past bookings, streak count, and rewards badges earned after consecutive visits.

---

54. LLM API Cost Monitor — Tracks spend across OpenAI/Anthropic/Gemini keys in one dashboard. $15/month, devs hate surprise bills.

Verify the app builds successfully after the landing page edits and metadata changes.

Add a Stripe checkout flow for the $15/month plan from the landing page CTA.

Implement an onboarding screen that asks for my OpenAI/Anthropic/Gemini API keys and starts tracking usage.

Connect the dashboard charts and ticker to real spend data and make it auto-refresh.

Add configurable spend threshold alerts that notify me when my monthly usage is approaching a limit.

---

55. Multi-Platform Post Repurposer — One script in, auto-formatted for IG/X/YouTube Shorts captions. You're building this for yourself anyway —package it. $15/month

Add Stripe checkout so I can offer a $15/month plan for Reprint.

Implement caption customization controls so I can choose tone, length, hashtags, and platform styles before generating.

Create a generation history panel so I can revisit, copy again, and download past results.

Add export options so I can download formatted captions as a text or CSV file.

---

56. BIG TIMER

---

57. Agri Price Hub App + Web

Mandi Price Checker — Real-time crop prices at nearby markets via data.gov.in's Agmarknet dataset. Farmers currently rely on middlemen for this info. Free + ₹49/month SMS price alerts, every place in India needs to be converd every state, district, everything

Implement SMS alert subscriptions for the ₹49/month plan with double opt-in and delivery status tracking.

Add a “My Markets” dashboard where I can save locations and crops and manage my alert preferences.

Create an admin panel to manage the waitlist, export leads, and update account status.

Add interactive price history charts for each mandi and crop over time.

Offer notification channel options (SMS and WhatsApp) so I can choose how I receive alerts.

---

58. Favicon Generator from Logo — ad supported

---

59. Word Counter + Readability Score — Writers/students, ad-supported.

Add an export button that generates a PDF report of my word count, readability scores, and keyword insights.

Implement a draft history so I can save my texts locally and revisit past word counts and readability scores.

Add a target grade-level feature that recommends specific rewriting tips to improve my readability score.

Include a help modal that explains each readability formula and how to interpret the scores.

---

60. Template-Based ID Card Generator — Local shops/small institutes. Ads supported

Add a template editor so I can customize card layout, fonts, and fields without code changes.

Implement a logo upload option so I can include each shop or institute’s branding on generated cards and exports.

Enable bulk export as a downloadable ZIP containing all generated PNGs for my CSV upload.

Add an ads settings panel so I can choose where ads appear on the bulk, templates, and guide pages.

---

61. Personal CRM for Warm Intros — Remembers who you met, when, what they care about — useful for your own job search + networking. $8/month.

App + Web

Implement Stripe checkout for the $8/month subscription.

Add webhook handling to activate and deactivate CRM access based on Stripe subscription status.

Create a billing page where I can view my plan and manage my Stripe subscription.

---

62. I want to build an app to quit my smoking addiction, or any kind of addiction

Add a daily check-in page where I can log cravings, whether I resisted, and any notes.

Implement push or email reminders so I can get scheduled nudges to do my check-ins and stay on track.

Create a dashboard analytics section with charts for streak length, cravings frequency, and milestone progress over time.

Add an onboarding step where I set my quit date, main triggers, and preferred intensity so the app tailors my recovery plan.

---

63. I want to build an app in which users can swipe left and right the most useful websites, there will be about 1000 websites that are use full and of different 5 categories portfolio websites, Coding Websites, AI websites, in general and all mixed

Add a tap-to-open detail modal for each website with the full description, category, and external link.

Improve the saves drawer into a polished “My Favorites” page with sorting, category filters, and quick open.

Implement a search and category filter that updates the swipe deck in real time without breaking the swipe animations.

Persist my saved websites in local storage so my favorites remain after refresh and across devices when possible.

---

64. Aadhaar-Format Masking Tool — Redact sensitive numbers from scanned docs before sharing. Free + ads (privacy-first tools always get shared)

Add a short interactive onboarding walkthrough that shows users how to upload a scan, auto-detect Aadhaar numbers, drag redaction boxes, and download the masked PNG.

Implement a detection confidence overlay that highlights each detected 12-digit Aadhaar number and lets users quickly accept or remove each box.

Add a before-and-after comparison slider so users can instantly see what was masked versus the original scan.

Add export options that let users download the masked result as both PNG and JPG.

Add a clear privacy-first data handling notice on the landing page and inside the tool confirming everything stays in-browser and nothing is uploaded.

---

65. Personal CRM for Warm Intros — Remembers who you met, when, what they care about — useful for your own job search + networking. $8/month
Implement a quick signup-to-dashboard onboarding flow where I create my first contact and see a personalized welcome checklist.

Create a CRM dashboard that lets me add, edit, and search contacts with expanding profile cards and micro-interaction previews.

Add scheduled follow-up reminders so I get gentle notifications for when to reach out again to each person.

Integrate Stripe checkout for the $8/month plan with a clean pricing section and an in-app upgrade flow.

---

66. Client Contract + Escrow-Lite for Freelancers — Simple milestone-based payment holding for Indian gig workers (Upwork alternative for direct clients). 2% fee per transaction.

Implement a full pricing section with the live 2% fee calculator walkthrough from project size to escrow total.

Add a freelancer signup flow with a profile step for skills, location, and preferred currency for escrow.

Implement a client dashboard flow to create a milestone contract, add deliverables, and send an invite to the freelancer.

Create an escrow dashboard that shows milestone status, allows releasing funds per milestone, and provides downloadable agreement details.

Add a security and trust section with micro-animations for fraud prevention, dispute handling, and transparent fee breakdown.

---

67. A Practo clone — Booking friction, unreliable real-time doctor availability. → A real-time-availability booking tool for one specific medical specialty.

Add email confirmations for booking holds and confirmed appointments.

Implement appointment cancellation with real-time slot release back into availability.

Build a console feature to create and manage doctor working hours and specialties.

Add SMS or email reminders for upcoming appointments before the scheduled time.

Create an audit log in the clinic console for all booking and slot state changes.

---

68. Cross-Platform Saved Content & "Digital Hoarding" Synthesizer

App + Web app

Add a browser extension so I can clip links from any page into my vault with one click.

Implement smarter duplicate detection so I don’t end up with repeated items when the same link is saved multiple times.

Add smart collections that automatically group items by topic, source, or AI-generated tags.

Add an export feature so I can download my saved items, notes, tags, and digests as JSON/CSV.

Allow me to schedule daily or weekly AI digests and get them via email.

---

69. Scientific Brain Games

Implement the remaining 8 brain game modules (dual n-back, SMART logic, Stroop, task-switching, 3D mental rotation, matrix patterns, backward sequence span, and Go/No-Go) with full state logic, scoring, and timers.

Create the complete `docs/expo/` specification for building, configuring, and running the app on iOS/Android with the offline-first storage and state setup.

Add an offline-first app shell with the offline service worker so the app stays usable without network access, including asset caching and routing.

Connect each game’s results flow to the local analytics dashboard with consistent skill-metric updates and score progression over time.

Add local storage versioning and migration logic for profile/streak/xp/rewards data so existing users keep their progress across schema updates.

---

70. A tool that turns "here's my trip, budget, and interests" into a full day-by-day travel plan.

Add an interactive editor so I can tweak the generated day-by-day plan and immediately re-sync the budget and packing list.

Implement shareable URLs that let me view a generated itinerary on another device without regenerating it.

Integrate a map view for each day so I can see suggested stops and routes for hour-by-hour segments.

Add support for multiple travelers with per-person budgets and separate packing lists based on my group details.

---

71. UPI Split — Split bills/rent among roommates with UPI deep-links to request money directly, ada integrated.

Add an expense ledger page that shows all past splits, settlements, and group activity for each roommate.

Implement recurring expenses so I can schedule monthly rent or utilities and automatically split them on a chosen date.

Add email and in-app notifications to remind roommates to settle balances when a split is created or overdue.

Add a way for me to record non-equal adjustments (tips, partial payments, or reimbursements) and recalculate balances automatically.

Generate a downloadable PDF or CSV report of the group’s balances and UPI settle-up requests for a selected date range.

---

72. PDF Merger/Splitter/Compressor — Evergreen search volume, monetize with ads or ₹49/bulk export, Not only this much Image to Pdf, pdf to image and everything that you can imagine of people want to do with PDFs, just like I love pdf, even for features and functionality than that like edit pdf, etcz etc.

Add a download and processing history panel so I can revisit and re-download my recent PDFs.

Implement a clear job queue with real-time progress indicators for large PDF merge/split/compress jobs.

Add reusable presets for common workflows (e.g., split into N pages, compress to target size) so I can run them in one click.

Improve accessibility with keyboard navigation, focus states, and ARIA labels across the tool UI.

---

73. Regex Tester + Plain-English Explainer — Devs hate regex; AI explains it. Ads

Implement a saved history so I can revisit my recent patterns, flags, and test inputs.

Add shareable links that preserve my pattern, flags, and test text so I can send examples to others.

Detect risky patterns and show plain-English warnings about catastrophic backtracking and how to mitigate them.

Enable exporting my test results and AI plain-English explanation as a downloadable PDF or JSON file.

---

74. JSON/CSV Formatter & Converter — Dev utility, ad-supported,

Add a conversion history panel so I can revisit my last JSON/CSV inputs and outputs.

Implement one-click download buttons to save the formatted or converted JSON/CSV result as a file.

Add CSV configuration options like delimiter, quote character, and header row detection for more reliable parsing.

Add optional JSON Schema validation so I can enforce structure before converting or displaying data.

Add inline table editing with re-validation and instant conversion back to JSON and CSV.

---

75. Automated Subscription Auto-Cancellation & Free Trial Shielding

Search Patterns / High-Volume Queries: "how to stop unexpected recurring charges", "auto cancel free trial app", "track hidden subscriptions app".

Fix the TypeScript strict-null build errors in src/lib/recurring.ts so the project compiles cleanly.

Implement the landing page and the /auth sign-in/sign-up flow with a protected app shell.

Create the dashboard UI that shows my risk-sorted subscriptions, money at risk, and a danger zone summary.

Add a subscription onboarding flow that lets me create subscriptions via manual entry, receipt paste, or statement import.

Implement the AI receipt parsing server function and a cron-callable alert dispatch route that fills my in-app alert inbox.

---

76. SaaS MVP Boilerplate (React + Express + Supabase) — Your exact working stack from the NAV/SIP tracker, cleaned up as a ready-to-deploy starter. $29–49.

Add the Pricing, FAQ, and footer sections and wire them into the home page so it no longer shows the placeholder.

Create the /auth page with email/password and enable Google sign-in.

Implement the protected /app layout with a sidebar and an authenticated dashboard shell.

Enable items CRUD in the /app using the existing server functions and display them in the UI.

---

77. AI Customer Support Widget for Small Shopify Stores

Verify the widget script embed flow in a real Shopify theme and document the exact install steps.

Add configuration options so merchants can customize widget color, button text, and chat launcher position.

Implement Shopify webhooks to sync customer and order info into each chat thread for better support.

Add an agent/admin assignment workflow so threads can be claimed, transferred, and resolved.

Enable exporting resolved chat transcripts as PDF or CSV for each store.

---

78. PG Rent Tracker — For hostel/PG owners to manage people who paid the rent and who has not and send reminders, etc and all other features

Implement scheduled recurring reminders for unpaid rent and configurable reminder timelines per tenant.

Add CSV and PDF export for monthly registers, tenant ledgers, and yearly income reports.

Generate downloadable payment receipts for each marked-paid transaction and email them to tenants.

Add a bulk import flow to add tenants and rooms from a CSV file with validation and error feedback.

Create an audit activity log so owners can track changes like mark-paid updates, edits, and settings modifications.

---

79. Blood Bank/Donor Finder [API note: needs eRaktKosh aggregator or manual partnership] — Genuinely lifesaving utility for emergencies. Free, monetize later via hospital partnerships.

Add email and SMS notifications when an emergency request matches a nearby eligible donor.

Implement live eRaktKosh stock syncing using the ERAKTKOSH_API_URL secret with caching and an admin view for sync status.

Add an admin panel to onboard hospitals, manage partnership status, and approve donor-requester access rules.

Add geolocation and radius-based donor search so “Find blood now” returns the closest eligible blood banks and donors.

---

80. Court Case Status Tracker [API note: needs eCourts aggregator] — Lets people track their own hearing dates without paying a middleman. High value for underserved legal-aid population.

Integrate the eCourts aggregator so my court-refresh pulls authoritative hearing updates for each case.

Add an SMS option for hearing reminders alongside email, including per-user opt-in and delivery status.

Add a feature to upload and store supporting documents (PDF/images) for each case and show them on the case detail page.

Add a one-click export to ICS or Google Calendar so users can add upcoming hearings to their personal calendar.

---

81. Bio Link Page (Linktree alt, India payments) — Free tier + ₹99/month for custom domain/analytics.

Implement a ₹99/month subscription so users can upgrade from the free tier.

Add a custom domain setup flow with domain verification and enforcement for paid users.

Validate link click tracking end-to-end and show real-time analytics in the dashboard.

Test the full flow by signing up, creating links, publishing a public bio, and confirming analytics updates.

---

82. Dynamic QR Code Generator — Editable destination after printing

Add a set of one-click QR style templates (colors, frames, and logo) for my dynamic QR codes.

Implement a bulk import flow to create many QR codes at once from a CSV and assign destinations.

Add an option to export per-code analytics and scan history to CSV or PDF.

Implement destination targeting rules so scans can route to different URLs based on time window or geolocation.

Enable users to upload a logo/image to embed in the QR code with a live preview and safe sizing.

---

83. No-Login Invoice PDF Generator — Instant, no signup friction. Ad-supported + ₹49 for logo/branding

Implement a ₹49 branding upgrade that lets me upload a logo and applies it to every generated invoice PDF.

Add invoice presets so I can quickly reuse my company details and typical line items without retyping every field.

Add selectable page size (A4/Letter) and automatic pagination for long invoices so the PDF never cuts off content.

Add a shareable URL workflow that lets me reopen a specific invoice draft and regenerate the PDF without signup.

---

84. Color Palette Extractor from Image — Designers/devs, free + affiliate to design tools.

Add a history panel so I can revisit my recent extracted palettes and re-open their images quickly.

Implement a WCAG contrast checker for my selected swatches and show pass/fail for common text sizes.

Add an option to download a high-resolution palette PNG with labels and the HEX values rendered on the image.

Implement affiliate click tracking so I can measure conversions from each recommended tool.

Add shareable links that encode the palette (colors + mode) so I can send results to others.
